

OVERVIEW

C3-540 CORIOmaster is a powerful, efficient approach to building large video display systems. Multiple video windows can be positioned on LED, display based videowalls or projector edge blends, displaying any of the sources connected to CORIOmaster. Windows can be visually “transitioned” into position, resized or rotated to any proportion allowing designers to achieve striking visual effects. Each system can support up to 4 separate video canvasses with up to 14 windows depending upon the source resolution, frame rate and size of windows. CORIOgrapher v2, the control software for the CORIOmaster series of processors, is a simple, easy to use design interface that enables window and source positioning and transition effects. This dynamic feature is easily managed through presets in CORIOgrapher or by simple commands executed by third party control systems. 50 presets can be saved permanently in the system.

NEW FEATURES

Secure Command Interface

Secure Communication mode – The latest CORIO**master** release provides a mode to encrypt all networked based communication through AES128 encryption to provide private communication in mission critical applications where network security and authentication is essential. REST API / WebSocket - Based on industry standard schema, CORIO**master** supports REST API providing multi-user communication to device. Integrators can now subscribe to a growing range of events to provide real time feedback from CORIO**master** (such as: HDMI handshake, lost source, USB stick removed, etc). These events can be used by a control system to automatically monitor the performance and events of the videowall and respond accordingly.

Control

Multiple control points - Using our REST API up to four users can now control a single CORIO**master** chassis simultaneously making programming, control and fault finding a dream. In addition to control via CORIO**grapher**, simultaneous control is possible using the CORIO**master** app (IOS and Android) and by a third-party control system using our real-time API interface. CORIO**grapher** login profiles – System administrators can set different levels of control for up to four user profiles for Power User and User access control. Emergency cut/mute features – Cut individual canvasses to black and mute audio or cut all outputs to black and mute.

Audio management

Audio can be passed through the system from source to display. Alternatively, audio can be de-embedded and outputted and re-embedded on another source for each of your four canvasses. Input and output volume control together with audio mute gives full control.

New Modules

Quad HDMI output module -The Quad HDMI scaled output module allows you to produce up to 56 1080p outputs with your CORIO**master** C3-540. Now, you can create enormous video walls, projector edge-blends, and LED installations. S/PDIF and analog audio module - This module slots into a data slot (Slot 18) on the rear of the CORIO**master** and accepts discrete analog and digital inputs and embeds them into all audio supporting video outputs (HDMI/SDI/HDBaseT/DVI-I) or routed to the discrete analog or digital outputs in this module.

Streaming Media & 4K Playback Module

Higher bandwidth support – A doubling of the module bandwidth to 100mbps means you can de-encode two network streams up to 4k 30 @ 50mbps in to just 1 slot (2nd Stream scaled to 1080P). Increased bandwidth is also available for media playback up to 80mbps on a single channel for increased quality content and interoperability. H.265 Support – H.265 streams offer higher quality with file sizes of around half that of a H.264 stream. Low Latency Mode - Low latency mode delivers less than 300ms (source to output) video latency for most demanding applications in conjunction with the Magenta Encoder-100.
